Roadmap**

# The Problem

## 1 INFORMATION IS FRAGMENTED

Academic and administrative information is published across university websites, departmental notices, WhatsApp groups and other communication channels.

## 2 FORWARDED INFORMATION IS DIFFICULT TO VERIFY

Students may receive an official-looking PDF/image through a group without knowing whether it is authentic, current, revised or superseded.

## 3 OFFICIAL INFORMATION ITSELF CHANGES

University communications are frequently revised, corrected or replaced, creating multiple versions that students must manually reconcile.

# Why Existing Systems Fall Short

| Year | Body                        | What happened                                             |
|------|-----------------------------|-----------------------------------------------------------|
| 2021 | AICTE                       | Fake recruitment circulars via impersonators              |
| 2022 | UGC                         | Fake mandatory-offline-exam notice, denied publicly       |
| 2022 | AKTU                        | Fake exam timetable — forged exam controller's signature  |
| 2024 | UP Police Recruitment Board | Fake exam-date notice went viral                          |
| 2025 | Cabinet Secretariat         | Fake recruitment notice + fake admit cards                |
|      | CBSE                        | Fake board-exam cancellation notice                       |
| 2026 | NTA (NEET-UG)               | Fake “confidential” NEET-UG re-examination pattern notice |

## Repeated Incidents Across Indian Institutions

# Our Solution: FinalSay

## WHAT FINALSAY DOES

-  **1. CONNECT**  
Links a forwarded PDF, image, URL or text to related official institutional communications.
-  **2. UNDERSTAND**  
Extracts key information like issuer, date, deadline, audience, action, referenced notices.
-  **3. COMPARE**  
Detects whether communications are superseding, contradictory, partially overriding or unrelated.
-  **4. TRACK**  
Maintains the timeline and version history of institutional communications.
-  **5. VERIFY**  
Identifies the current controlling version when sufficient evidence exists.
-  **6. STAY HONEST**  
If conflicting official information cannot be resolved, FinalSay shows **UNRESOLVED** — human confirmation required.

## WHAT STUDENTS GET

-  **Know what's official and current**  
No more guessing.
-  **Save time**  
No need to search multiple portals.
-  **Understand the context**  
See how notices relate and why the current one applies.
-  **Transparency**  
Every answer comes with an evidence trail.
-  **Built for students, fair for everyone**  
Works across departments, offices and campuses.

FinalSay doesn't just find the notice. **It determines the relationship between notices and makes the current state traceable.**

## STUDENT SIDE

Students get clarity and confidence before they act.

### RECEIVE

Student receives a notice  
via any channel

### VERIFY

Check authenticity and  
current status instantly

### UNDERSTAND

Understand context, changes  
and why it applies

### ACT

Take the right action  
with confidence

# FinalSay

The Trust Layer for  
Institutional Communication

### CONNECT

Link the notice to related  
official communications

### COMPARE

Detect contradictions,  
supersessions and  
relationships

### TRACE

Build timeline and  
version history of  
communications

### VERIFY

Identify the current  
controlling version with  
evidence trail

## INSTITUTION SIDE

Institutions publish with consistency and transparency.

### DRAFT

Create and draft official  
communications

### DETECT

System detects potential  
conflicts or overlaps

### REVIEW

Human review and resolve  
identified issues

### CONFIRM

Confirm and publish the  
controlling version

**Optional:** activates once an institution opts in — the Core platform (top + middle) works independently on publicly available notices.

# How FinalSay Works

From any forwarded notice to the current, trusted answer.

**USER NEED**

“I received this notice. What currently applies, and why?”

FinalSay brings clarity, traceability and confidence.

# From Documents to Institutional Knowledge

---

## Ingestion

PDF, webpage or email notice captured with source URL and retrieval timestamp.

## Provenance & Hashing

SHA-256 content hash and issuer metadata attached before any processing begins.

## Structured Extraction

OCR/LLM-assisted parsing into typed fields: issuer, audience, action, eligibility, dates.

## Human Validation

Extracted fields reviewed and confirmed by an authorized issuer before publication.

## Version Linking

Each notice linked to prior versions, extensions, corrections or supersessions.

## Institutional Knowledge Base

Confirmed, versioned notices become a queryable, citable record of institutional truth.

# The Intelligence Layer

**Key principle:** ML never turns a prediction into an official decision on its own — every proposal is explicit and reviewable.

**Human-in-the-loop:** conflicts remain marked Unresolved until an authorized user confirms them.

# System Architecture & Technology Stack

**Deployment principle:** frontend, backend and storage remain independently configured, containerized (Docker) and observable — no serverless-only deployment.

**Security baseline:** HTTPS/TLS everywhere, least-privilege RBAC, SHA-256 integrity hashes on every file.

# Evaluation, Impact & Future Roadmap

---

## Extraction Accuracy

Field-level precision measured against a labelled, held-out test set.

## Relationship F1

Precision/recall on contradiction, supersession and cancellation detection.

## False-Alert Rate

Share of flagged conflicts issuer review rejects as non-issues.

## Time-to-Locate

How quickly a user reaches the current, applicable notice.

## Impact

Fewer conflicting instructions reaching students; faster, citable official answers.

## Future Roadmap

Six-month evaluation-ready platform; pilot with a real institution; expand beyond Tier 1.
